(54) INTERIOR MATERIAL FOR VEHICLE

(57)Abstract:

PURPOSE: To eliminate a malodor in a car room in an effective manner by providing a plush part installed at the surface side of a ground fabric in protrusion and a bagging material set up at the backside, and installing an activated carbon layer on the ground fabric.

CONSTITUTION: An activated carbon layer 4 is made up of a fibrous activated carbon sheet which forms activated carbon into fibrousness and made it into a nonwoven fabric structure. Pile yarn 2a is sewn in over a ground fabric 1 and the activated carbon layer 4 in a state that this activated carbon layer 4 is superposed on top of the ground fabric 1, whereby the ground fabric 1 and the activated carbon layer 4 are joined together, while a loop of the pile yarn 2a is projected upward the activated carbon layer 4 and thus a plush part 2 is being formed. When a tufted carpet in a suchlike structure is installed in a cab of an automobile, such an action as absorbing a malodor in the cab is brought into full play by the activated carbon layer 4 in addition to a function inherent in the tufted carpet.
